

HOMEWORK 3

6500-324: DATA MANAGEMENT FOR INFORMATION SYSTEMS (Fall 2022)

©2022 by ecourse.org

Part 1. Multiple Choice or True/False

1. (1 point) What technique is used to model the situation that Student may have multiple addresses?
A) Associative Entity (gerund)
B) Weak entities
C) Super/sub types
D) Recursive relationships
2. (1 point) In SQL statements, constraint X foreign key (Y) references Z, what is Y?
A) The name of the foreign key columns in the current table
B) The name of the constraint
C) The name of the table to which the foreign resides
D) The name of the table from which the corresponding PK resides
E) The name of primary key columns in the referenced table
3. (1 point) The difference between char(100) and varchar2(100) is that, when actual text is less than 100 characters, varchar2(100) will automatically save the remaining unused spaces for other uses. True or False
A) True
B) False
4. (1 point) What is not right about weak entities?
A) often used to model multivalued attributes
B) do not have a full UID themselves
C) must have 1:m relationships with a strong entity
D) cannot exist independently of a strong entity
5. (1 point) How is a gerund converted into a relational model?
A) ignore the gerund in the conversion
B) convert the gerund into a table without primary key
C) Convert the gerund into a table duplicate the primary keys of its both ends as a part of the composite foreign key for the gerund table
D) convert the gerund into a table and duplicate the primary keys of its both ends as a part of the composite primary key for the gerund table
6. (1 point) Which of the following is NOT required by the referential integrity rule #1
A) A foreign key column must have the same data type as the corresponding primary key column
B) A foreign key column must have the same field size as the corresponding primary key column
C) A foreign key column must have the optionality as the corresponding primary key column
D) None of the above
7. (1 point) (check all that apply) Which of the following may use check constraints?

- A) primary key
 - B) foreign key
 - C) domain validation rules
 - D) Business rules
 - E) Arc implementation
8. (1 point) (check all that apply) Which of the following is true about constraint names?
- A) it can be used for DBA to identify a constraint easily
 - B) Two constraints can have the same name if they are located in two different tables
 - C) All constraints must be named uniquely
 - D) Constraint names are case sensitive
9. (1 point) What is the command to remove table xyz and also any constraints that are attached to it?
- A) drop table xyz;
 - B) delete from xyz;
 - C) drop table xyz cascade constraints;
 - D) delete from xyz where count(*) >=1;
10. (1 point) (check all that are necessary) Which Oracle server parameters do you need to know in order to set up an client to connect to the server?
- A) Host Name or IP address of the server
 - B) Oracle Serial Number
 - C) TCP Port Number to Oracle Service
 - D) Oracle Instance ID
 - E) Operation Systems that Holds Oracle
